

## Assignment- 4

Assignment Date	09 November 2022
Project Name	Personal Expense Tracker
Project ID	PNT2022TMID33567

### Question 1:

Pull an image from docker hub and run it in docker playground.

2. The Docker daemon pulled the "hello-world" image from the Docker Hub. (amd64)

3. The Docker daemon created a new container from that image which runs the executable that produces the output you are currently reading.

4. The Docker daemon streamed that output to the Docker client, which sent it to your terminal.

To try something more ambitious, you can run an Ubuntu container with:

```
$ docker run -it ubuntu bash
```

Share images, automate workflows, and more with a free Docker ID:  
<https://hub.docker.com/>

For more examples and ideas, visit:

## Question 2:

Create a docker file for the job portal application and deploy it in Docker desktop application.

### DOCKER FILE:

```
1 FROM python:3.8-buster
2
3 WORKDIR /app
4
5 COPY requirements.txt /app/
6
7 RUN pip install -r requirements.txt
8
9 COPY . /app/
10
11 RUN cp .env.dev.sample .env
12
13 EXPOSE 8000
14
15 RUN chmod +x entrypoint.sh
16
17 CMD ["sh", "entrypoint.sh"]
```

## DEPLOYMENT OF JOBPORTAL APPLICATION:

The screenshot shows the IBM Cloud Container Management console. On the left sidebar, the 'Containers' tab is selected. The main area displays a list of containers. The 'Only show running containers' toggle is turned off. A search bar is present at the top right of the container list. The container list has columns for NAME, IMAGE, STATUS, PORT(S), STARTED, and ACTIONS. Two containers are listed: 'agitated\_neumann' (status: Exited (137)) and 'jolly\_turing' (status: Running). The 'jolly\_turing' container is the one running the 'jobportalapplication:latest' image. The bottom status bar shows 'RAM 3.06GB', 'CPU 0.57%', 'Connected to Hub', and 'v4.13.0'.

	NAME	IMAGE	STATUS	PORT(S)	STARTED	ACTIONS
<input type="checkbox"/>	agitated_neumann 918d20882039	icr.io/helloapp/ibm:latest	Exited (137)	49160:8080		
<input type="checkbox"/>	jolly_turing b62c0712bdd3	jobportalapplication:latest	Running	1234:8000	4 minutes ago	

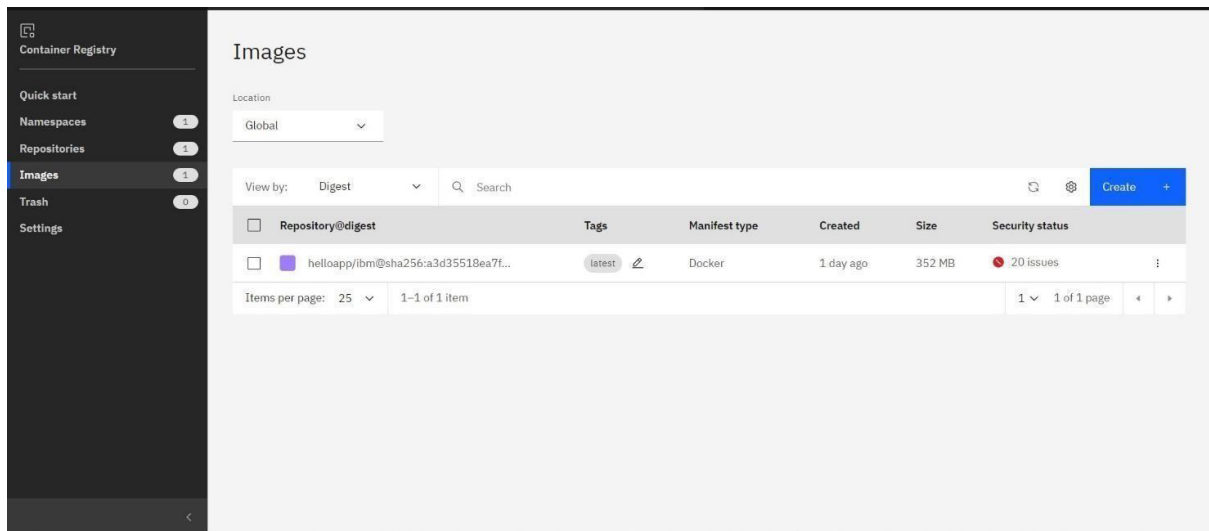

## OUTPUT:

### Question 3:

Create a IBM container registry and deploy helloworld app or jobportapp.

## IBM CONTAINER REGISTRY DEPLOYMENT:

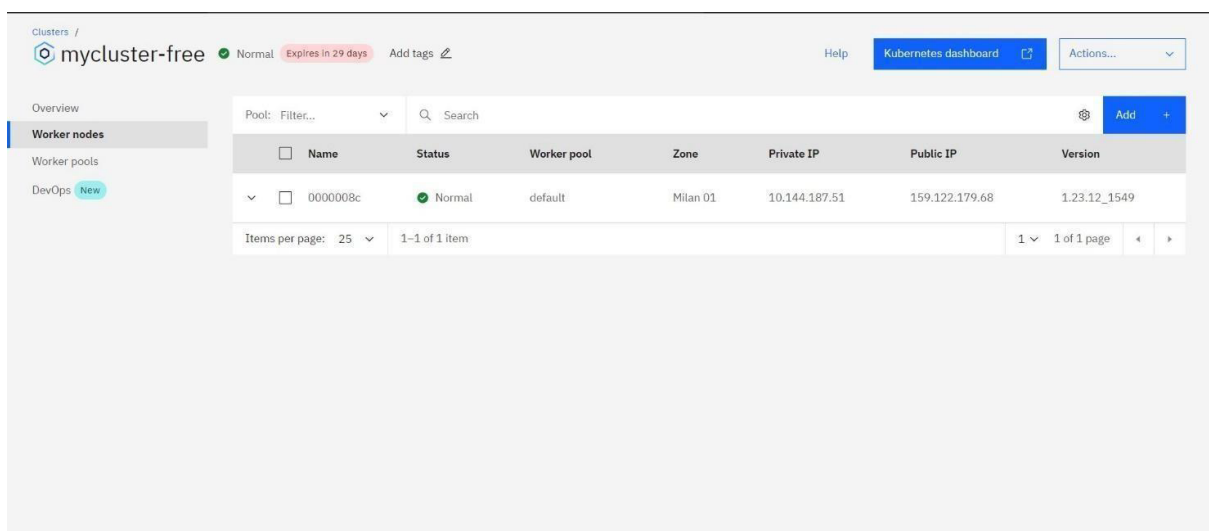

OUTPUT:

#### Question 4:

**Create a Kubernetes cluster in IBM cloud and deploy hello world image or job portal image and also expose the same app to run in node port.**

**Creating Kubernetes cluster in IBM cloud and exposing node port:**

## Output:
